

Create GitHub App

GitHub App name *

The name of your GitHub App.

Write

Preview

Markdown supported

This is displayed to users of your GitHub App

Homepage URL *

The full URL to your GitHub App's website.

Identifying and authorizing users

Add Callback URL

The full URL to redirect to after a user authorizes an installation.

Read our [Callback URL documentation](#) for more information.

Callback URL

e.g. <https://example.com/auth>

Delete

☒ Expire user authorization tokens

This will provide a `refresh_token` which can be used to request an updated access token when this access token expires.

☐ Request user authorization (OAuth) during installation

Requests that the installing user grants access to their identity during installation of your App

Read our [Identifying and authorizing users for GitHub Apps documentation](#) for more information.

☐ Enable Device Flow

Allow this GitHub App to authorize users via the Device Flow.
Read the [Device Flow documentation](#) for more information.

Post installation

Setup URL (optional)

Users will be redirected to this URL after installing your GitHub App to complete additional setup.

☐ **Redirect on update**

Redirect users to the 'Setup URL' after installations are updated (E.g. repositories added/removed).

Webhook

☒ **Active**

We will deliver event details when this hook is triggered.

Webhook URL *

Events will POST to this URL. Read our [webhook documentation](#) for more information.

Secret

Read our [webhook secret documentation](#) for more information.

Permissions

User permissions are granted on an individual user basis as part of the [User authorization flow](#).
Read our [permissions documentation](#) for information about specific permissions.

Repository permissions

Repository permissions permit access to repositories and related resources.

Actions

Workflows, workflow runs and artifacts. [Learn more.](#)
